

PREMIERE, HONESTLY

You nested it. Premiere lost it.

The clip is in your
master. The usage list
does not think so.

A clip inside a nest, cut into your master.

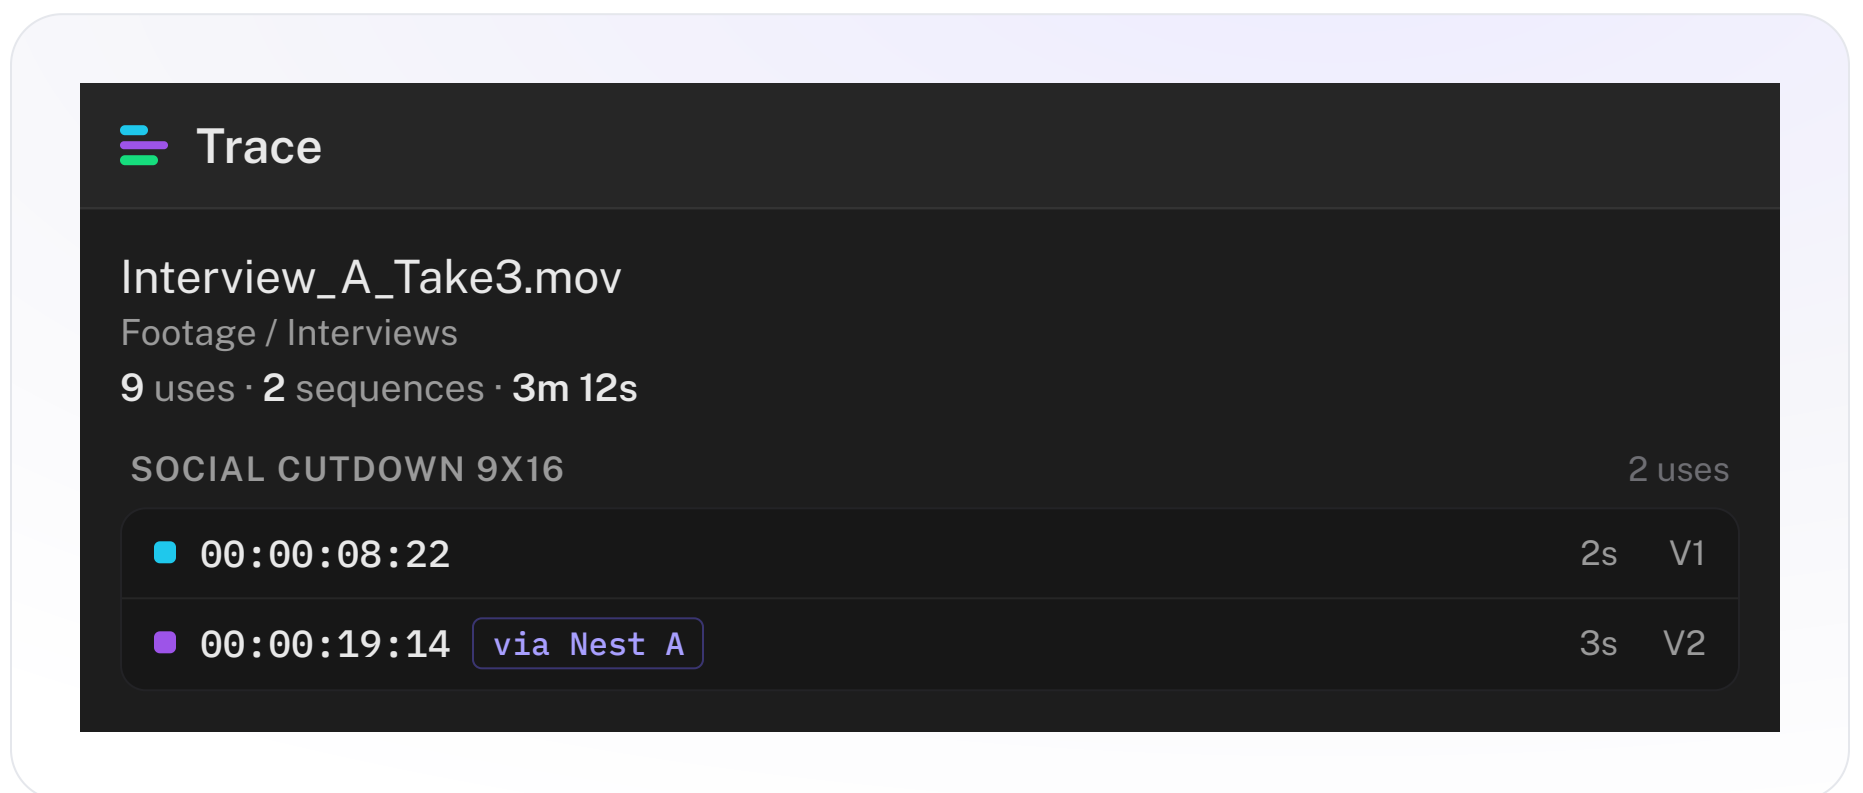

That violet block is Nest
A. Your clip is inside it,
three layers down.

WHAT NATIVE TELLS YOU

**It reports the use
inside the nest.
Then it stops.**

It never mentions where that
nest lands in the sequence you
are actually cutting.

Trace reports both.

The use inside the nest,
and where it lands in your
master.

THE DIFFERENCE

NATIVE

Stops at the nest.

TRACE

**Reports both, labelled
via Nest A**

One of these tells you the
shot is still in the cut.

FREE, FOR GOOD

Nests included. Free.

The download link is in the post.

Free download for Mac & Windows.
Premiere Pro 25.6 or newer.
