

PREMIERE, HONESTLY

Your project is carrying
media **no cut uses.**

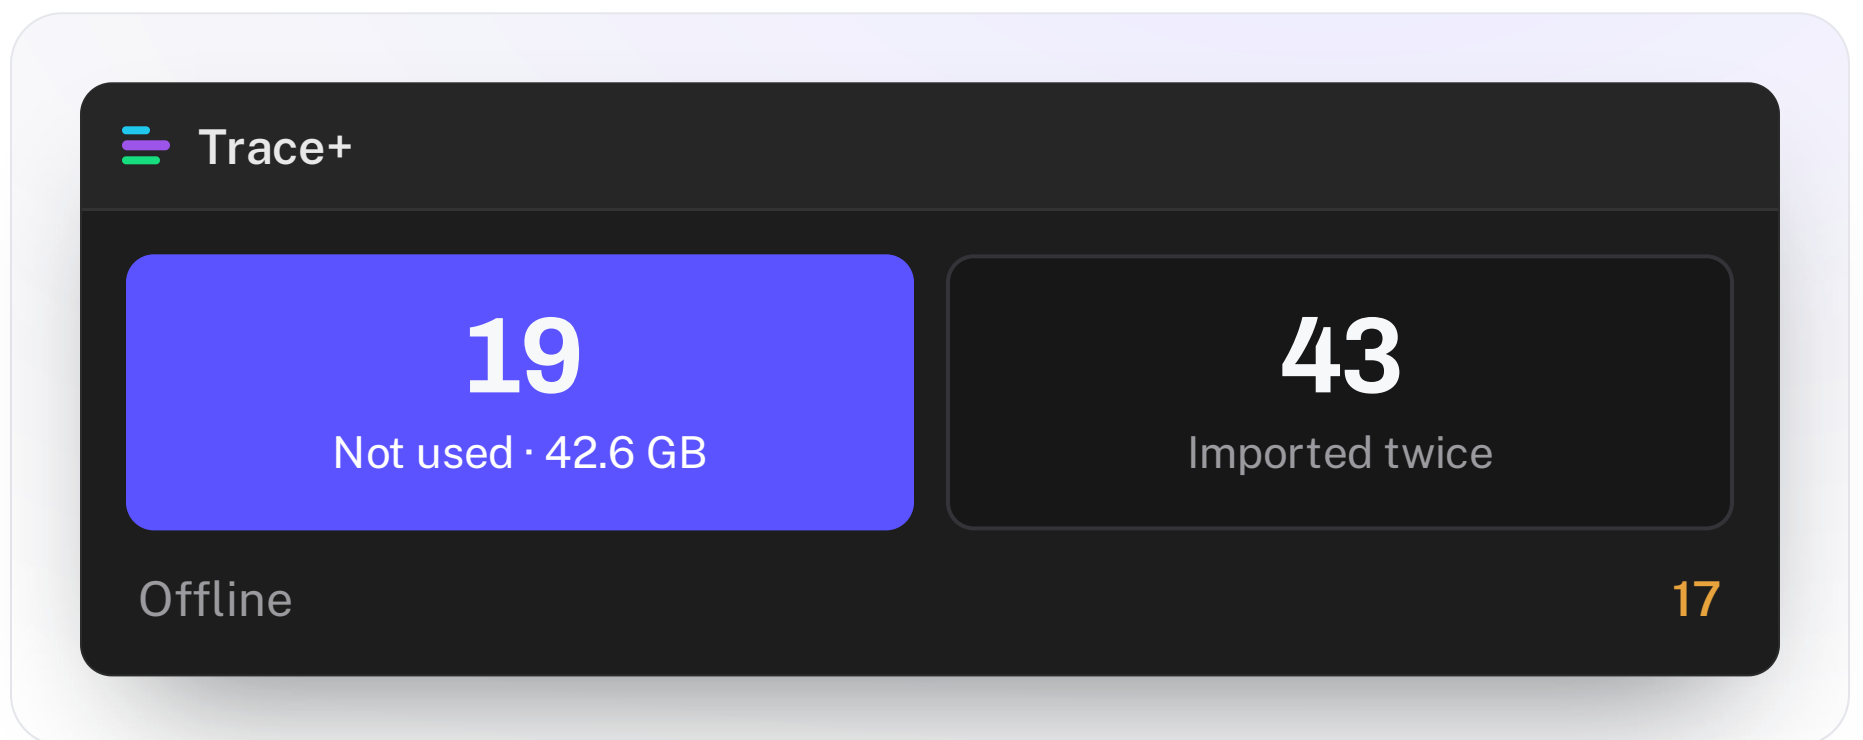

You just cannot see how
much.

ONE REAL PROJECT. ONE SCAN.

42.6 GB

of media that no sequence
uses.

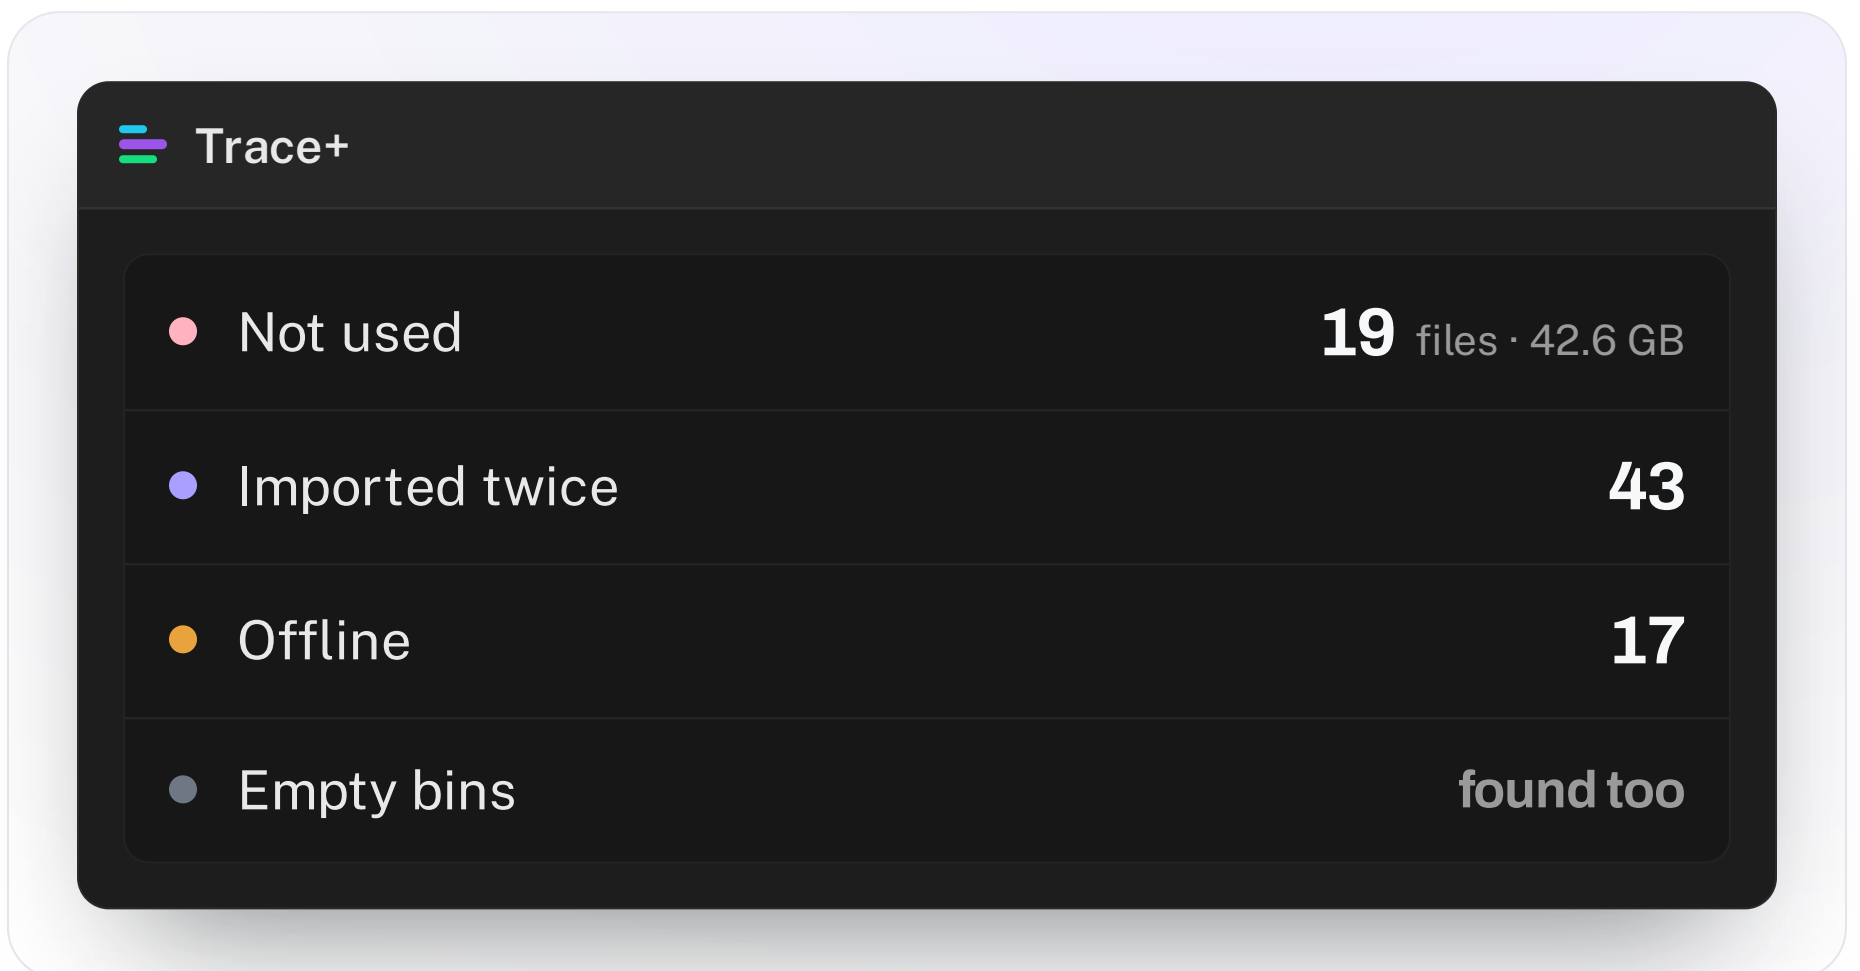

SWIPE →

THE PROBLEM

**Premiere can tell
you a clip is unused.
Not what that is costing you.**

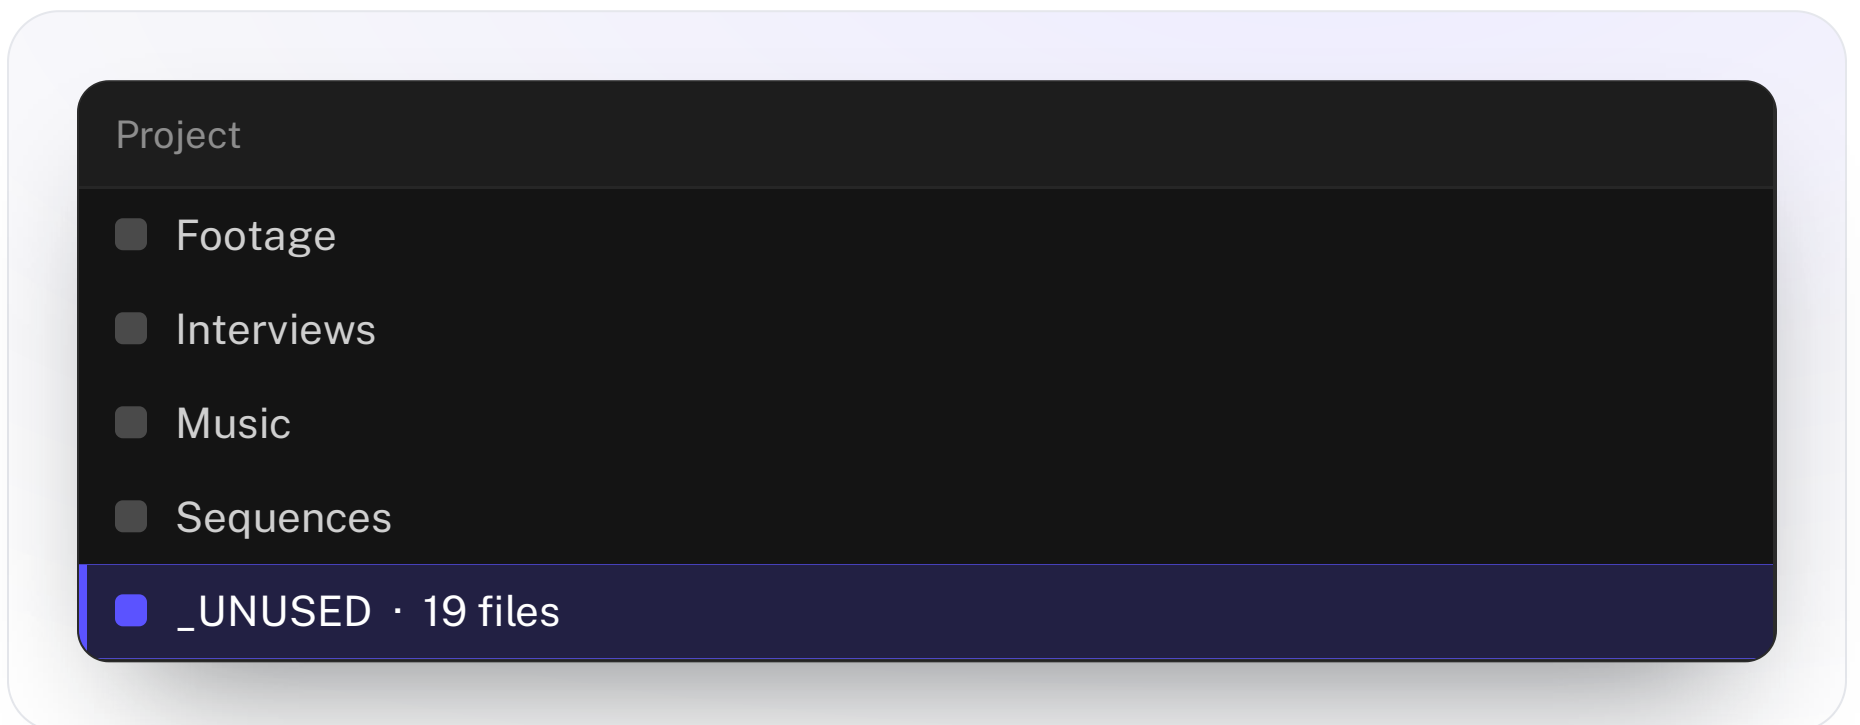

Across 15 sequences, 4
cutdowns and a social version.

Trace+ scans every sequence and adds it up.

One pass. The whole project, not one clip.

Then it files them into a bin you choose.

Nothing leaves your drive.
It moves inside the
project, not on disk.

CHANGED YOUR MIND?

Cut one back in and Trace+ can put it back.

In the bin it came from.
Automatic put-back ships
switched off. You turn it on.

SWIPE →

THE DIFFERENCE

TRACE • FREE

Scans one clip.

TRACE+ • £29

Scans your entire project.

Same engine. One of them is free, and it is a good place to start.

SWIPE →

TRACE+ • £29

The whole project. Not one clip.

 The link is in the post.

Start with Trace, the free one. Same engine.
Premiere Pro 25.6 or newer.
