

Trim a rough cut with two keys

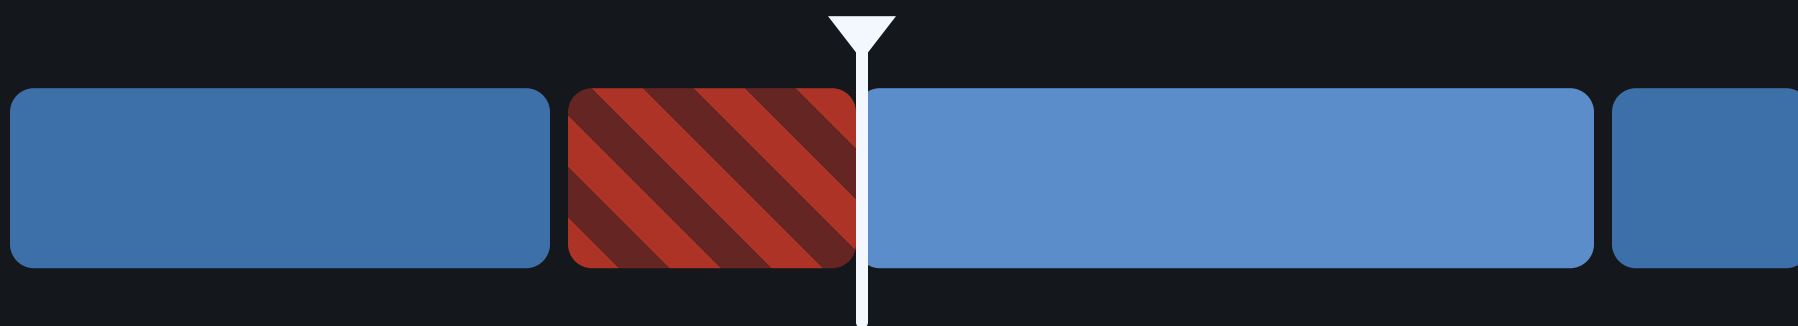

Q

W

Ripple trim to playhead →

Q · RIPPLE TRIM PREVIOUS EDIT TO PLAYHEAD

BEFORE

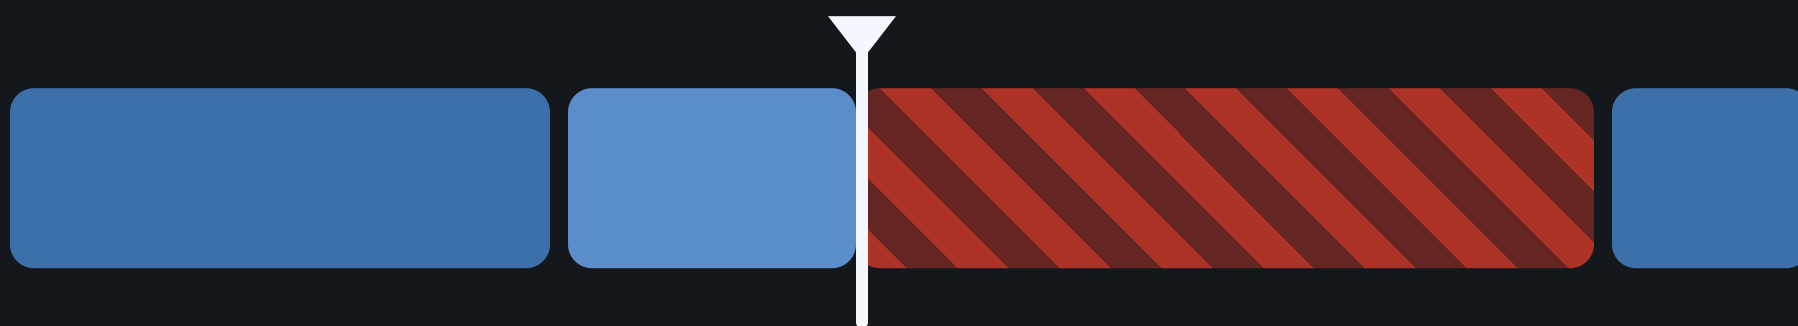

AFTER Q

Everything before the playhead goes, and the gap closes up behind it.

W · RIPPLE TRIM NEXT EDIT TO PLAYHEAD

BEFORE

AFTER W

Everything after the playhead goes. The rest of the timeline shuffles up on its own.

Q does nothing?

It only trims targeted tracks. Check which tracks are switched on at the left of the timeline.

A Premiere Pro tip, every Monday and Friday.

Save this one for your next edit – and if you've got a better way, tell me in the comments.
