

Find the gaps before QC does

Sequence > Go to Gap

Go to Gap →

NEXT IN SEQUENCE

TIMELINE

Jumps the playhead to the next empty spot in the timeline, however tiny. Keep going until it stops moving.

TWO WAYS IN

Next in Sequence – the whole timeline

Next in Track – just the selected track. Handy for holes in the music bed

No shortcut out of the box

Give it one in Keyboard Shortcuts – search “gap”. The cheapest QC check you’ll ever do.

A Premiere Pro tip, every Monday and Friday.

Save this one for your next edit – and if you've got a better way, tell me in the comments.
