

PREMIERE, HONESTLY

14 uses.
Nine are in cuts
you binned in July.

And there is no way to
tell which is which.

You keep old versions. Everyone does.

A `_PREVIOUS` bin, a `v01`, the cut the client signed off before they changed their mind.

Project

☐ `_PREVIOUS`

☐ Brand Film v04

☐ Brand Film v03

☐ Brand Film v01

☒ Interview_A_Take3.mov

THE PROBLEM

Premiere counts
every one of them.

There is no filter. There has
never been a filter.

Trace hides them by default.

V1

9 uses hidden in old cuts

AND THIS IS THE BIT THAT MATTERS

It tells you how many it hid.

A tool that quietly decides
things for you is a tool you stop
trusting the first time it is
wrong.
