

Adobe Premiere tip of the day

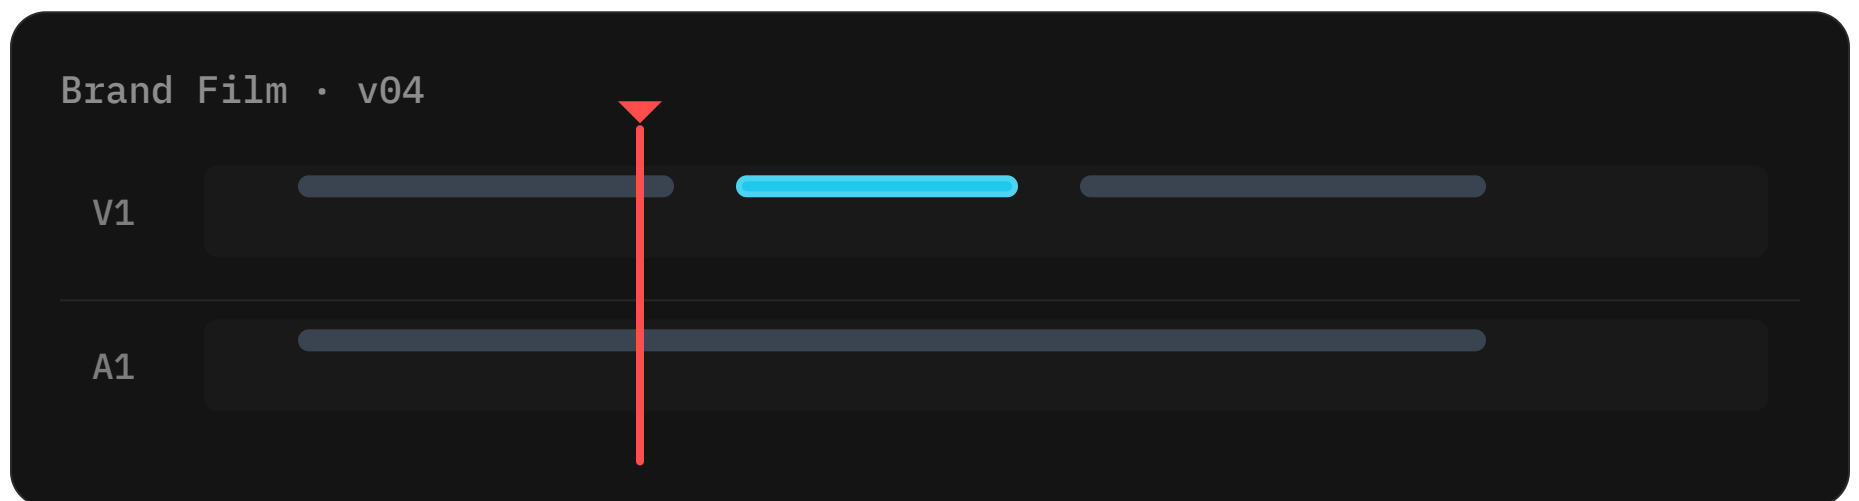

TIP 02 · LIFT & EXTRACT

**Two keys
nobody
presses.**

TIP 02 • LIFT & EXTRACT

Take four seconds
out of the middle.

 Mark an in and an out first. Everything below happens
between them.

TIP 02 • LIFT & EXTRACT

 ; ’

Then pick one.

 ; lifts. The bit goes, the gap stays.

 ’ extracts. The bit goes, everything after it slides up.

Two keys, two kinds of gone.

Two things worth knowing.

The razor way is two clicks and a drag, and it is where an accidental single-track cut comes from.

Both obey track targeting, so untargeted tracks stay exactly where they are.

TIP 02 • LIFT & EXTRACT

Mark it, then choose.

Decide which kind of gone you meant before you press anything.
