

Adobe Premiere tip of the day

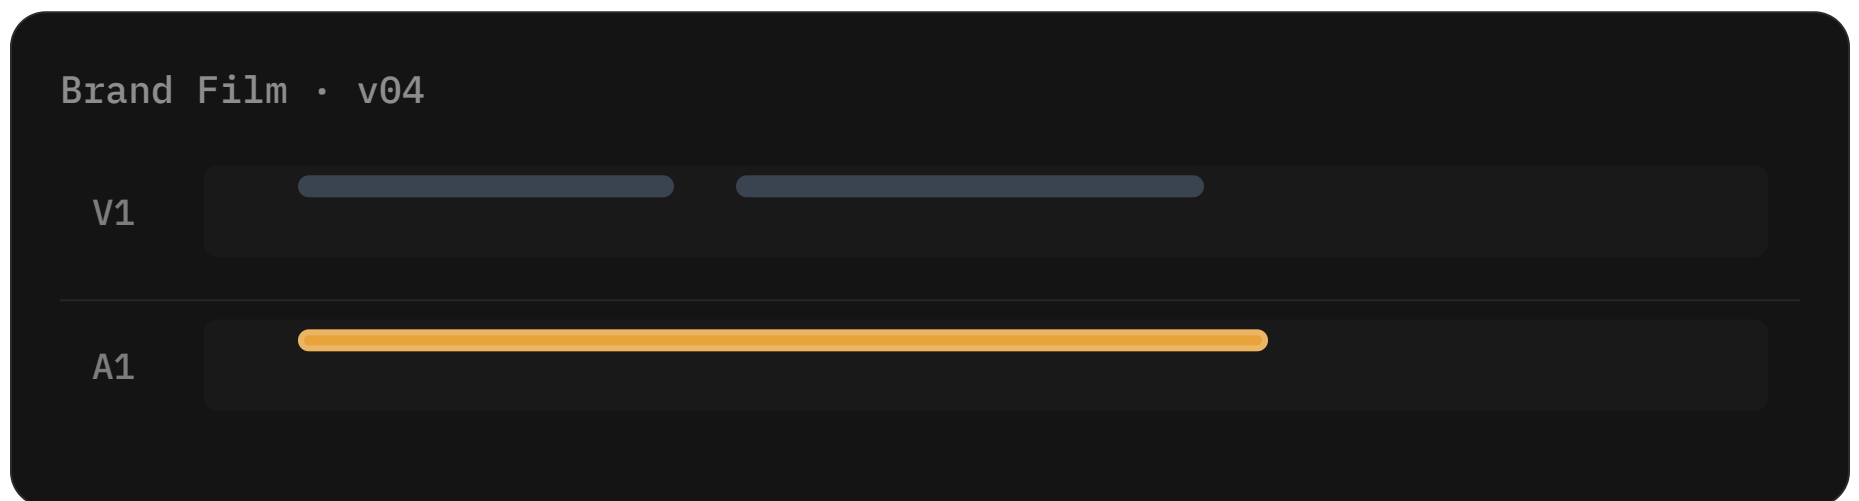

TIP 04 • SYNC LOCK

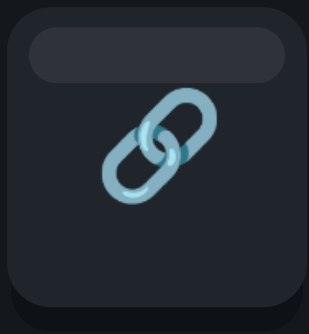

“Why has
my music
moved?”

TIP 04 • SYNC LOCK

You extract four seconds.
The music jumps forward.

 Not a bug. That is sync lock, doing exactly what it says, on a track you did not think about.

TIP 04 • SYNC LOCK

Two locks.

Track lock — do not touch this track at all.

Sync lock — ripple this track too, so everything stays in sync.

The little icon to the LEFT of the padlock is the one that moves your music.

Two things worth knowing.

🎵 Turn sync lock off on a music bed and it will sit still while you cut.

⚠️ Leave it on for dialogue and its sync audio, which is what it is for.

TIP 04 • SYNC LOCK

Check the left icon.

Ten seconds of looking beats an
afternoon of wondering.
