

Adobe Premiere tip of the day

TIP 06 • LABEL COLOURS

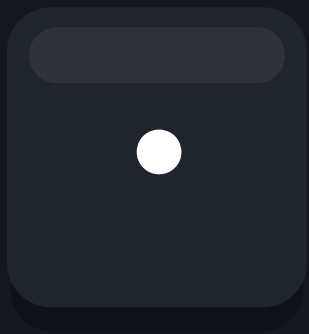

Labels are a status system.

TIP 06 • LABEL COLOURS

It is 5pm on delivery day.

- Green — the best takes
- Mango — VFX, out at comp or back from After Effects
- Violet — temp. Music, stock, anything that gets replaced
- Blue — signed off by the client
- Yellow — waiting on something

 What is still temp? What is still waiting on legal? The timeline should answer that without a spreadsheet.

TIP 06 • LABEL COLOURS

One click, every temp thing.

Right click a label in the Project panel → **Select Label Group.**

Every clip wearing that colour,
selected at once.

Two things worth knowing.

The colours do not matter. Using the same ones every job does.

Set them in **Preferences > Labels** so a new project starts with your system, not Adobe's.

TIP 06 • LABEL COLOURS

Pick five. Keep them.

Do you have a colour label system in Premiere?
