

Adobe Premiere tip of the day

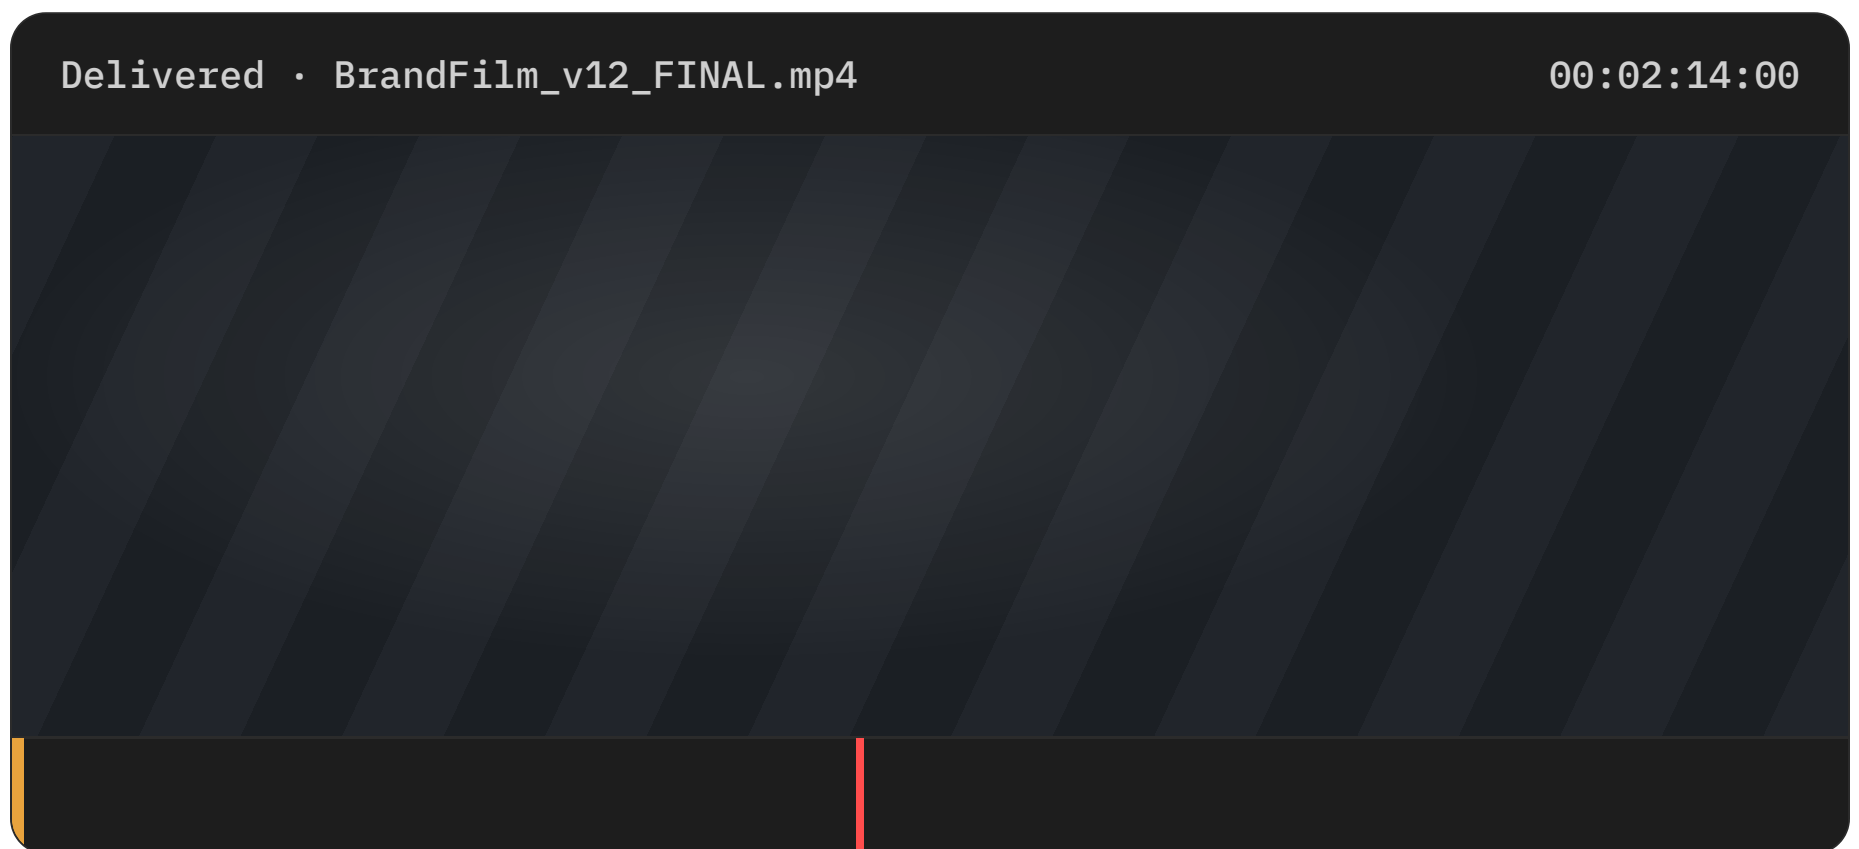

TIP 08 • SCENE EDIT DETECTION

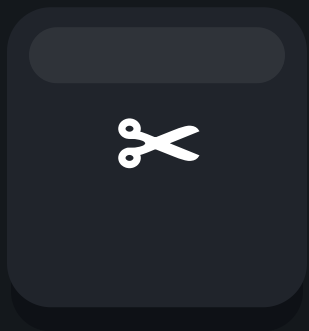

One flat file.
Every cut
back.

TIP 08 • SCENE EDIT DETECTION

“Just a couple of changes to this one.”

 And what arrives is a single flattened export, with no project anywhere.

TIP 08 • SCENE EDIT DETECTION

Right click it.

Scene Edit Detection — every cut found, an edit point at each one.

Optionally as clips in a new bin, so you can work rather than blade by eye.

Two things worth knowing.

Good for recutting an old piece nobody has the project for, or reversioning something made elsewhere.

It is not magic. **Dissolves** confuse it, and it gives you structure, not your source media back.

TIP 08 • SCENE EDIT DETECTION

Keep it in your back pocket.

The day you need it, it saves an
afternoon of blading by eye.
